

Pull and Burn / Deep Bury

Date published: 30 March, 2015

This is available for the removal and destruction of all recently planted ash trees (less than three years of age) that are on *Chalara fraxinea* / *Hymenoscyphus pseudoalbidus* infected sites.

Trees must be removed through pulling. Removed trees must be disposed of in a manner which prevents any risk of infection spread, usually by burning or deep burial on site.

Grant support is available for the net area of ash served with a Statutory Plant Health Notice, i.e. if the original scheme was five hectares and ash was 20 per cent then one hectare will be funded. It will not be available for other tree or shrub species.

We will only approve your application if you agree to replant any area of woodland you clear.

Further information

Please ensure you abide by conditions set out in the Forestry Grant Scheme claim form and guidance.
