

Stock Disposal

This is an old version of the page

Date published: 23 January, 2023

Date superseded: 20 December, 2023

For recent changes to this guidance, please see the [bottom of the page](#).

Aim

The aim of this option is to benefit the condition of moorland habitats by reducing grazing or trampling pressure.

Sheep are selective grazers and can influence the types of plants present on moorland, particularly when grazing pressure is high.

Removing some of the sheep will help ensure that heather and other valuable moorland plants flourish and continue to support a wide range of birds and wildlife, and that vulnerable soils are protected.

Eligibility

Land that is rough grazing is eligible.

You should not include areas of land covering rocks, scree, water, dense bracken etc. We will check this using the same approach we use to check land for the Basic Payment Scheme.

Assessing your land eligibility

You must combine this option with the [Moorland Management](#) option.

Additionally, you must identify on a 1:10,000 map the area of moorland which will benefit from stock reduction.

Spatial targeting

[Map of target area – Stock Disposal \(PDF, Size: 1.0 MB\)](#)

doc_external_url: <https://www.ruralpayments.org/media/resources/Updated-targeting-map---Stock-disposal-16-12-2015.pdf>

This option is available within the target area shown on this map. It may be possible to apply for this option outside this area where there is strong justification as endorsed by NatureScot.

You can check if this option is available on your holding using the search targeting tool which can be found on any of the following AECS guidance pages:

[Capital Items](#)

Application requirements

You must complete a moorland management plan in accordance with the template below.

Moorland Management Plan Template (MS Word, Size: 211.2 kB)

doc_external_url: <https://www.ruralpayments.org/media/resources/AECS-Moorland-Management-Plan-2023.docx>

You must detail in your moorland management plan the number of ewes and gimmers that you propose to dispose of. The plan must take into account the need to avoid under and overgrazing.

The plan must detail the total number of ewes and gimmers recorded on both the holding and the business as of 1 December for the three years prior to application. You must submit flock records to support this.

If you have recently acquired the holding, you cannot apply for stock disposal as you do not have three years sheep figures. For succession cases, (where all land and stock transfer to a new owner), you must consult RPID before applying for this option and they will advise if you are eligible.

If you are applying for continuation of stock disposal under a previous NatureScot or Scottish Government agri-environment scheme you must provide justification that stock disposal is still required to benefit the habitat.

If your IACS business has changed significantly since stock disposal was first agreed, (due to purchasing additional land and stock) then you must re-calculate your IACS business baseline figure, using the last three years figures.

Management requirements

You must manage the same location and extent each year for the duration of your contract.

- you must remove the agreed number of sheep from the area subject to payment and your IACS business after you have signed and returned a contract and you have been advised that work can commence, and before 1 March in the first year of your undertaking
- you must maintain the reduced number from the area subject to payment and you must not exceed the Reduced Flock Size in your IACS business for the period of the contract
- with your first claim, you must provide evidence (proof of sale and movement records) to show the sale or removal of breeding ewes over and above your normal sale of cast ewes, and that the sale or removal was within the required timeframe above
- if receipts from sheep sales do not specify breed and/or age, you must provide this as supplementary information

Payment

You can claim £24.83 per hectare per year.

For the purposes of payment, it is assumed that each ewe or gimmer that you remove will benefit 0.8 hectares of moorland.

A supplement of £8.08 per hectare per year will be available where the stock disposal will affect your ability to claim Scottish Upland Sheep Support. The supplement is not available where the original stock disposal took place prior to 2007.

Applications for stock disposal and Scottish Upland Sheep Support supplement should be restricted to the number of ewes or gimmers (rounded down to the nearest whole number) within a stocking rate of one ewe or gimmer per 0.8 hectares of usable area in each field parcel.

It is proposed that Scottish Upland Sheep Support will be payable on ewe hogs born on Scottish holdings which have 80 per cent or more of their agricultural land in Scotland's Basic Payment Region Three and less than 200 hectares of agricultural land in Scotland's Basic Payment Region One.

The supplement will only be payable on the proportion of stock disposal which takes you below one ewe hogg for every four hectares of Region Three land. Further details and a calculator are provided in the [supporting guidance](#).

Inspections

The inspectors will check:

- you have managed the same location and extent each year for the duration of your contract
- you have removed the agreed number of sheep before 1 March in the first year of your undertaking and maintained the reduced number from the area subject to payment
- you must not have exceeded the Reduced Flock Size in your IACS business for the period of the contract. There may be a records check
