Date superseded: 19 May, 2015

This management option is subject to approval by the European Commission and may change.

Aim

The aim of this option is to benefit a range of existing or newly created wetland habitats by maintaining appropriate grazing regimes.

Wetlands are areas where the soil is saturated either permanently or seasonally. They support a range of plant types and reducing or removing grazing during the summer and then grazing in the autumn will ensure that flowering species can set seed and germinate.

Wetlands support a variety of plants, insects, amphibians, reptiles, mammals and birds. They also help slow water flow and act as natural water storage zones helping to reduce the impacts of flooding downstream.

Eligibility

Land that contains either an existing wetland or is where you propose to create a new wetland is eligible. This includes fen meadow, reed beds and salt marsh.

You should not include areas of land covering rocks, scree, water, dense bracken etc. We will check this using the same approach we use to check land for the Basic Payment Scheme.

[Assessing your land eligibility](#)

For arable land where you wish to create new wetland you must undertake this option with the [Creation of Low-input Grassland to Convert Arable Land at Risk of Erosion or Flooding](#) capital item.

Spatial targeting

This option is available throughout Scotland.

Application requirements

You must identify on a map the locations of any existing or proposed wetland to be managed.

Where you wish to create new wetland you must specify in your application how you will raise water levels in order to create the wetland.

Management requirements

You must manage the same location and extent each year for the duration of your contract.

- where you propose to create a new wetland you must do so by the 1 June in the first year of your contract, unless you have prior written approval to do otherwise
- where you propose to create low-input grassland you must do so by the 1 June in the first year of your contract
- you must graze and / or cut the area subject to payment
 - if grazing, you must adhere to an approved grazing regime defining the stocking density and grazing dates
 - if cutting, you must cut after 15 August and before 30 September. Cutting outwith these dates is acceptable with prior written approval. In particular, this applies to reed beds

[Grazing Management Plan \(MS Word, Size: 135.8 kB\)](#)

doc_external_url: <https://www.ruralpayments.org/media/resources/Grazing-Management-Plan-AECS-April-2015.docx> [Plan template]

- do not apply lime, fertiliser, slurry or farmyard manure
- do not allow the land to become heavily poached or vehicle tracked
- do not carry out supplementary livestock feeding unless with prior written approval
- do not spray, except for the spot-treatment of injurious weeds (requires prior written notification) or treatment of invasive species (requires prior written approval)
- do not plough or cultivate the area, except to aid establishment when creating wetland on arable land
- do not establish new drainage
- you must maintain a diary

Payment

You can claim:

- £90.03 per hectare per year for management
- £284.80 per hectare per year for creation and management

There are separate capital items to support wetland creation:

- [Ditch Blocking – Peat Dams](#)
- [Ditch Blocking – Plastic Piling Dams](#)
- [Wetland Creation – Field Drain Breaking](#)
- [Wetland Creation – Pipe Sluices](#)
- [Moving or Realigning Ditches](#)
- [Creation of Species-rich Grassland](#)

Inspections

The inspectors will check:

- where you create a new wetland, it is in place by 1 June in the first year of your contract
- you have grazed and / or cut the area subject to payment
 - if grazing, you have adhered to an approved grazing regime defining the stocking density and grazing dates
 - if cutting, you have cut after 15 August and before 30 September
- you have not carried out supplementary livestock feeding
- there has been no ploughing, cultivation or storage
- the area has not become poached or vehicle tracked
- there has been no application of lime, fertiliser, slurry or farmyard manure
- you have not sprayed, unless with prior written notification or approval as appropriate
- you have not established new drainage
- you have maintained a diary

Additional guidance

[Supporting guidance is available for this option.](#)
