Date published: 30 March, 2015

Date superseded: 8 December, 2015

Aim

The aim of this option is to benefit farmland birds.

Blocks or strips of seed-bearing crop mixtures grown under low-input management will support arable plants and provide grubs and insects for farmland birds during the summer.

Then, during the winter and into spring, the crop will provide both seed and cover for birds.

Eligibility

Land that is not rough grazing is eligible.

You should not include areas of land covering rocks, scree, water, dense bracken etc. We will check this using the same approach we use to check land for the Basic Payment Scheme.

[Assessing your land eligibility](#)

Spatial targeting

[Map of target area – Wild Bird Seed for Farmland Birds \(PDF, Size: 1.5 MB\)](#)

doc_external_url: [https://www.ruralpayments.org/media/](https://www.ruralpayments.org/media/resources/1_Wild_Bird_Seed_Farmland_Birds.pdf)

[resources/1_Wild_Bird_Seed_Farmland_Birds.pdf](#) This option is available within the target area shown on this map.

Application requirements

You must identify on a map the locations of any areas to be managed under this option each year.

Management requirements

This option can be moved around the farm within the normal rotation and on an annual basis.

To maximise flexibility you can manage a different total hectareage each year as long the area you manage each year is at least 90 per cent of the area you plan to manage in the first year under this option.

- each spring, you must manage a crop of a seed mixture which must include at least three small seed-bearing crops to include both a cereal and an oil-rich crop (e.g. oats, triticale, barley, quinoa, linseed, millet, mustard, fodder radish)
- the blocks or strips must be at least six metres wide
- do not harvest, graze, plough or cultivate the area before 1 March following the year of establishment
- do not spray, except for the spot-treatment of injurious weeds (requires prior written notification) or treatment of invasive species (requires prior written approval)

Payment

You can claim £322.63 per hectare per year subject to the following maximum claims:

- five hectares per year per location code unit of up to 250 hectares

- 10 hectares per year per location code unit of greater than 250 hectares
- you can claim for up to two hectares per block or strip per contract

There is a separate capital item to support this, which you will need to claim each year:

- [Creation of Wild Bird Seed for Farmland Birds](#)

You will only be paid for the area that you manage and declare annually.

Inspections

The inspectors will check:

- the area claimed is not on rough grazing
- the size of the area claimed for each plot
- that plots are at least six metres wide
- the correct spring-sown mixture has been sown (invoice check may be required) for chosen management and has not been harvested, grazed, sprayed (unless with prior written notification or approval as appropriate) or ploughed down before 1 March the following year

Note

If you choose to apply for this option over the same area of land that you are allocating as an Ecological Focus Area to meet your Pillar 1 greening requirements, there may be an issue of [double funding](#).

Additional guidance

[Supporting guidance is available for this option.](#)
