Aim

The aim of this option is to support the targeted control of grey squirrels (*Sciurus carolinensis*) in areas where they are a threat to red squirrel (*S. vulgaris*) populations.

Grant support

This is an annual recurrent grant to support the labour costs for effective grey squirrel control. This includes the setting and monitoring of traps, the humane despatch of live animals and the completion of cull returns.

The grant rate is £200 per trap per annum for up to a maximum of five years.

You may wish to apply for capital item options to encourage appropriate habitat management for red squirrels in stronghold areas and other priority areas identified in the revised Scottish Red Squirrel Strategy:

[Woodland Improvement Grant – Habitats and Species](#)

[Woodland Improvement Grant – Restructuring Regeneration](#)

Application eligibility criteria

Before applying for this option, you should check that you are eligible to apply for Forestry Grant Scheme funding using the link below.

[Sustainable Management of Forests](#)

To apply for this option, you must have an approved Forest Plan for woodland areas of 100 hectares or more. For woodland areas less than 100 hectares you must have an approved Management Plan or Forest Plan.

[Long-term Forest Plan technical guidance](#)

[Management Plan](#)

Please see the 'Supporting information' section below for the information you need to supply us when applying for this option. You must use the appropriate standard template to give this information.

Your application must be in one of the areas identified on the 'Indicative strategic priorities for red squirrel conservation' map, or north of the Highland red squirrel protection line, as detailed in the revised Scottish Red Squirrel Strategy.

[Indicative grey squirrel priorities map \(PDF, Size: 160.3 kB\)](https://www.ruralpayments.org/media/resources/Indicative-grey-squirrel-priorities-map---March-2015.pdf)

doc_external_url: <https://www.ruralpayments.org/media/resources/Indicative-grey-squirrel-priorities-map---March-2015.pdf>

You must have grey squirrels on your land and this must be confirmed by the local red squirrel project officer.

Other eligibility criteria

The number of traps and trapping sessions should be proportionate to the grey squirrel population and must be agreed with the local red squirrel project officer.

It should be based on both the estimated grey squirrel population in the area and previous trapping returns, to avoid over-deployment of traps.

You must trap for a minimum of 50 days per year.

This can be achieved through a combination of trapping sessions and days per session. For example, five trapping sessions of 10 days each.

Combinations can vary but you must record the number of days per trapping session throughout the year. It is recommended that trapping be completed between March and November.

A trapping session does not include the time for pre-baiting, however, pre-baiting must be undertaken at all sites to be trapped, to ensure effective control. You must kill any grey squirrels captured in the traps humanely and without delay.

You must not use live multi-capture traps where red squirrels are present. When you set traps for grey squirrels there is a legal requirement to check them for animals at least once a day.

You must also comply with the guidance set out in:

- [Forestry Commission Practice Note 4 – Controlling Grey Squirrel Damage to Woodlands](#)
- [Forestry Commission Practice Note 5 – Red Squirrel Conservation](#)
- the survey methods set out in the [Practical Techniques for Surveying and Monitoring Squirrels](#)
- applicants within a red squirrel stronghold must also comply with the guidance set out in [Forestry Commission Scotland Practice Note 102 – Managing Forests as Red Squirrel Strongholds](#)

It is an offence under the Wildlife and Countryside Act (1981) (as amended) to release grey squirrels into the wild.

In some areas, trapped grey squirrels may need to be tested for the squirrel pox virus (SQPV). The Saving Scotland's Red Squirrels project will advise you at the time of application if this applies.

Supporting information

We need supporting information to help us assess your application. Please provide the details listed below using the template provided.

[Sustainable Management of Forests – Species Conservation – Grey Squirrel Control supporting information template](#)

You must:

- give trapping evidence of the presence of grey squirrels on your land and information about the estimated risk to resident red squirrels

- provide a description of how your application provides a collaborative and sustainable approach to maintaining red squirrel populations of strategic importance
- provide a work programme which contains the following information:
 - the number of traps being deployed
 - the location of each trap and an indication of when trapping will take place
 - details about any proposed collaboration with neighbouring owners
- provide a statement from your local red squirrel project officer confirming the presence of grey squirrels on your land and supporting the number of traps you are proposing to use
- provide a map that shows the perimeter of the Sustainable Management of Forests – Species Conservation – Grey Squirrel Control boundary

[General mapping guidance for the Forestry Grant Scheme](#)

[Selection criteria](#)

We have set agreed financial budgets for each of the options under the Forestry Grant Scheme.

To make sure we make the most cost-effective use of available funding and to meet Scottish Government objectives, we will assess each application using a scoring criteria.

These criteria will be written as appropriate to each Forestry Grant Scheme option. We will set a minimum score that an application for any particular option must achieve to be considered for approval.

We will make details available before the start of the scheme.

[How to claim](#)

We will pay grants for up to five years for each year that your contract is covered by a Forest Plan or Management Plan. If your Forest Plan or Management Plan expires during the five years of your contract you must ensure that it is renewed in time to be able to continue making annual claims. We cannot pay your claim for any claim year that is not covered by a Forest Plan or Management Plan.

You must claim this grant on your Single Application Form.

You must submit evidence each year to enable payment, including:

- the 1:10 000 map showing the area that has been controlled
- the trapping dates
- numbers of grey squirrels caught (an Annual Record of Management form is provided to help you to record your management)

You must also record details (date and location) of sightings as evidence of the continued presence of grey squirrels within the funded area.

You must submit your records to your local Forestry Commission Scotland office between 1 December and 31 January. If we do not receive your records within this period we will not be able to pay your claim. Inspections will be made against the contract map and your control records.

[Grey Squirrel Control – Annual Record of Management Form](#)

Please be aware that this data will be shared with the Saving Scotland's Red Squirrels project, to allow detailed analysis of collective control effort and the benefits to red squirrels.
